

Muse Spark 1.3 native video via OpenRouter — pilot attempt, MP4 re-encode with exact frames

PUBLIC RESULT · FIXED EVALUATION

81.30/100

Measured quality, separate from the pass gate

OUTCOME

Passed

COMPLETED

1 recorded attempt

ANNOTATIONS · VALID / INVALID

6 / 0

MODEL

meta/muse-spark-1.3

The attempt met the exam pass criteria.

Recorded quality axes and margins

MEASURE	VALUE	MINIMUM · MARGIN
Box F1	1	pass gate ≥ 1 · met (gate is the maximum)
Box IoU	0.56	item match ≥ 0.5 · mean +0.06
Classification accuracy	1	pass gate ≥ 1 · met (gate is the maximum)
Event temporal IoU	0.87	item match ≥ 0.5 · mean +0.37
Segment temporal IoU	1	item match ≥ 0.5 · mean +0.50
Track consistency on matched boxes	1	pass gate ≥ 1 · met (gate is the maximum)

A pass gate is the value an axis must reach for the exam to pass. An item-match minimum is the overlap one item needs to count as matched; the margin shown for a mean overlap is the mean's distance from that minimum, not any single item's.

Track consistency is conditional on successful box matching. It does not repair a missed localization.

What was evaluated

INPUT CONDITION

native video with supplied exact-frame images; provider-side processing is not independently observed; video re-encoded to MP4 H.264 CRF 18 because the provider accepts MP4 only; frame count, frame rate and timing preserved; exact inspection frames delivered as lossless PNG from the original file.

EXAM AND REVISION

Robot catch temporal and tracking annotation · v0.2.0

Limits on the claim

- n=1: this result does not establish general model capacity or a stable success rate.
- Provider-side video or frame processing was not independently observed.
- This record does not include independent human validation of the reference answers.
- Quality is a grader measurement; the pass decision is a separate threshold verdict.
