01 Executive summary

Release status: HISTORICAL — superseded. A newer campaign carries these exams. This report is published so the earlier measurement stays checkable; its exams are NOT on the public featured index, and the current numbers are in the campaign the index names.

FIXED TASKS 1	SEALED RECORDS 3	MODEL LANES 1
ATTEMPTS 3	GRADED ATTEMPTS 0	CERTIFIED PASSES 0
LANE ERRORS (NOT GRADED) 3	WITHHELD / INVALID 0	

Purpose

This report records 3 attempts against 1 fixed certified annotation tasks. No attempt produced an attributable graded result. The exam defines a frozen workspace, tool contract, limits and an isolated grader; the outcomes below record the interruptions or exclusions that prevented a model measurement. The executive edition omits record-level chapters; the full report renders each sealed attempt record as a chapter derived from the same record as its standalone report. The full report authenticates the chapter bytes, while the standalone report carries its own digest.

Annotation campaign scope. This campaign evaluates one fixed annotation tasks with three sealed attempt records on each task (3 sealed attempts in total). The sealed tasks cover video inputs. Audio is N/A because no audio task appears in this campaign's sealed records. Token use and per-attempt cost are N/A because every recorded lane result marks token telemetry unavailable and no cost measurement is attached. Quality measurements are reported per task and remain separate from the strict certified-pass gate.

Outcome

0

certified pass(es) across 0 graded attempts (3 attempts, 3 lane error(s) not graded) in 1 cells — counted only where the grader accepted the submission AND containment was verified AND provenance is complete AND no integrity invariant or verdict-bearing harness suspicion applies.

fc-6fb3c7588801 · generated from 3 verified sealed record(s) · EXECUTIVE EDITION

Key findings across the campaign

- robot-video-1 · gemini-3.8-flash · **NO RESULT** — 0 certified passes / 0 graded attempts; 0 model failures; 3 excluded (3 lane errors, 0 withheld, 0 invalid).

02 Per-exam results

MODEL LANE	ANNOTATION VVDEX.ANNOTATION.ROBOT-VIDEO-1
------------	--

gemin-3.8-flash 0/0 + 3 lane errors

Each cell is *certified passes / graded attempts* for that lane on that exam. An attempt the lane ended before grading is reported beside the cell — 1/9 + 1 lane error, never 1/10 — and is outside the denominator; withheld and invalid attempts are reported the same way. A cell whose graded attempts all passed but which also holds such an attempt is shown as *passes with attempts outside the denominator*, not as a clean sweep — the clean-sweep state is reserved for a cell where every attempt was graded and every graded attempt certified. No cell here carries a percentage: these are separate exams, not one score.

03 Environment families

This campaign covers one exam(s) drawn from one environment family(ies). The sentence in each row is the family's own description of what the exam tests; nothing is claimed here that the exam does not.

FAMILY	EXAM	WHAT IT TESTS
Multimodal annotation	<code>vvdex.annotation.robot-video-1</code>	A robot-catching video is reviewed for temporal events, frame-level object boxes, track identity and occlusion.

04 Campaign aggregate across this one exam

MODEL LANE	CERTIFIED PASSES	GRADED ATTEMPTS	LANE ERRORS	WITHHELD	INVALID
gemini-3.8-flash	0	0	3	0	0

Raw counts first. *Graded attempts* = certified passes + model fails; lane errors, withheld and invalid cells are outside capability arithmetic in both directions. These one fixed annotation tasks measure different work, so no combined rate or confidence interval is reported. The totals are accounting counts only; the per-task results above carry the quality claims.

05 Harness status

harness SUSPECT. 1 of 1 exams include harness-suspect records (robot-video-1). Each fired rule is classified below; a verdict-bearing rule the record cannot clear from its own evidence withholds the affected cells. **0 cell(s) withheld** on that basis.

Here R1 records provider/API interruption as a diagnostic; it does not assert a grader defect or turn an ungraded lane error into a model result.

robot-video-1 · R1 · diagnostic

an API failure is a per-rollout lane event, already recorded on that rollout as lane_error; it cannot alter another rollout's grading. It lowers coverage, not verdicts.

robot-video-1 · R1 · diagnostic

an API failure is a per-rollout lane event, already recorded on that rollout as lane_error; it cannot alter another rollout's grading. It lowers coverage, not verdicts.

robot-video-1 · R1 · diagnostic

an API failure is a per-rollout lane event, already recorded on that rollout as lane_error; it cannot alter another rollout's grading. It lowers coverage, not verdicts.

06 Cells excluded from capability

An attempt is excluded from capability only when the lane, not the model, ended it (lane error), when the run cannot prove its own conditions (withheld), or when an integrity invariant fired (INVALID). A submission the hidden grader failed is a model result and is counted, never listed here.

EXAM	LANE	SEED	EXCLUSION	RECORDED REASON
robot-video-1	gemini-3.8-flash	0	lane error	HTTP 503
robot-video-1	gemini-3.8-flash	0	lane error	HTTP 429
robot-video-1	gemini-3.8-flash	0	lane error	HTTP 503

07 What the outcomes mean

- **CERTIFIED PASS:** the grader accepted the submission, containment was verified, provenance is complete and no integrity invariant fired.
- **model fail:** the submission failed the hidden tests under verified containment; a real, attributable model result.
- **lane error:** the provider or CLI lane failed (rate limit, quota, transport) before an attributable measurement existed; not a model result.
- **withheld:** the run cannot prove its own conditions (containment unproven, provenance incomplete, or a harness suspicion the record cannot clear); neither a pass nor a model failure.
- **INVALID:** an integrity invariant fired (isolation breach, evidence mismatch); the row is not a model result.
- **harness suspect:** the run's own self-check fired; each rule is classified as verdict-bearing or diagnostic, and verdict-bearing suspicion withholds the affected cells.

08 What this report withholds, and why

What a public document may print about a rollout is decided by what the exam GRADES, not case by case. Where the graded artefact is a change to a public upstream repository, a bounded redacted excerpt of the model's own diff is published. Where the graded output is an answer, a keyed value or the state of an application, nothing derived from the submission is published — no diff, no answer value, no model claim, and not the names of the hidden assertions a rollout failed, because a grader's name can carry the value it asserts. Withheld on every exam without exception: the contents of tool results, the hidden tests, the reference solution, host paths and keys. The counts, verdicts and intervals in this report are the grader's and are unaffected by what is withheld.

EXAM	DISCLOSURE CLASS	RULE APPLIED
robot-video-1	answer_key	Applied consistently to 3 sealed records. answer-key disclosure (ownership vvdex_proprietary — no declaration — proprietary by default; family annotation): the exam is VVDex evaluation IP and the graded output is an answer or a keyed value, so no submission content, diff, model claim or hidden-assertion name is published.

09 Evidence

Every number above is recomputable from the sealed records below; each record verifies itself with `vvdex-env records verify`, and this document was regenerated from them with `vvdex-env records campaign`.

10 Attestation

Certified results appear only where evidence proves them. Withheld, invalid and lane-error cells are never presented as model results, and no historical evidence was modified in producing this document. Counts are exact; below ten rollouts per cell no rate or ranking beyond the counts is asserted.
